

ELSMITH Consulting Website Changes

Project objective

The existing compiled ELSMITH Consulting website was updated surgically rather than rebuilt. The original React/Tailwind bundle, page structure, navigation, imagery, logos, styling, and existing functionality were preserved.

Content and presentation updates

Area	Changes made
Homepage	Updated the lead positioning to the source-supported performance-focused description: ELSMITH enables business excellence and impactful transformation through business process optimisation, leadership development, and operational execution. Existing slogan, hierarchy, imagery, navigation, and calls to action were preserved.
Contact details	Replaced the legacy rendered phone numbers with the approved mobile number +2348077892200 and email contact. Unsupported secondary phone contact was changed to an email contact path.
About page	Kept the approved About, Mission, Vision, sector, and geography content. Added detailed AGILE value descriptions for Accountability, Growth, Innovation, Leadership, and Excellence. Corrected Stanley Eluwa's role to Lead Consultant and replaced unsupported founder wording with the supplied profile details, including 20+ years of experience, speaker/facilitator/coach responsibilities, leadership and strategy workshops, capability development, talent development, transformation, HR transformation, process improvement/reengineering, job evaluation, organisational restructuring, and related frameworks.
Services page	Added the missing Employee Benefits & Wellbeing category with source-supported offerings covering mental health and emotional wellbeing, men's and women's health, employee benefits and lifestyle options, physical health and lifestyle management, financial wellbeing, and organisational culture and manager enablement. Added the five-stage How We Work process: Discover & Diagnose, Design & Co-Create, Develop & Align, Deliver & Execute, and Evaluate & Sustain.
LICENSE to WORK™	Updated the programme to state that it is a six-month Graduate Employability Programme for fresh graduates and professionals with 0–3 years' experience. Added the required three months of classroom learning, three months of internship, hybrid delivery, certificate, and employer partnership opportunity.
Executive Coaching	Added source-supported Executive Coaching content describing the structured and confidential development partnership, the five-part coaching

Area	Changes made
	approach, and Joyce Coker as Managing Partner & Lead Coach with the approved Leadership & HR and business transformation profile.
Book a Session	Removed the unsupported Calendly placeholder URL. Replaced it with a contact-based scheduling message and /contact CTA because no real booking URL was supplied in the source documents.
Footer	Added guarded client-side logic that automatically replaces the static copyright year with the current calendar year while preserving the existing footer layout and wording.

Booking, contact, and responsive UX implementation

Area	Changes made
Booking scheduler	Replaced the placeholder booking experience with a four-step mobile-first flow: date, time, visitor details, and review/confirmation. It uses Monday–Friday WAT availability, 60-minute appointments, a 15-minute buffer, server-validated slots, configurable blocked dates, approved ELSMITH session types, loading state, success state, error state, duplicate-slot protection, and a generated booking reference.
Contact form	Upgraded the existing Contact form with phone, company/organisation, subject/reason, server-side validation, CSRF protection, honeypot protection, rate limiting, loading state, and a clear success/error state.
Server-side delivery	Added cPanel-compatible PHP endpoints for CSRF, availability, booking, and contact submissions. SMTP credentials are read from the server-only <code>api/config.php</code> and are not included in the repository. Booking and enquiry notifications are delivered to the ELSMITH notification mailbox with visitor email as <code>Reply-To</code> .
Full-site mobile-first UX	Added responsive navigation drawer behavior, fluid typography, mobile-first containers and spacing, single-column mobile grids, responsive forms, touch-friendly controls, accessible focus states, reduced-motion support, and tablet/desktop refinements across the entire site—not only the booking modal.
Deployment protection	Added Apache protection for private configuration and booking storage, preserved SPA fallback routing, added a cPanel setup guide, and added Git ignore rules for production configuration and storage.

Technical implementation

The archive contained production assets and compiled bundles rather than an editable source tree. The update therefore uses a guarded `site_updates.js` enhancement layer attached from `index.html`. It waits for the existing application render, applies exact route-aware DOM updates, and re-applies safely during client-side navigation without replacing the existing application bundle.

The project also now includes `.htaccess` with an Apache rewrite fallback so client-side routes such as `/about`, `/services`, `/programs`, `/contact`, and `/book` resolve through

`index.html` when the requested path is not a real file or directory.

Validation

The homepage, About, Services, Programs, Contact, and Book a Session routes were inspected after the updates. The existing navigation and responsive visual structure remained intact. The new content markers and required programme facts were confirmed in the live DOM. The enhancement script passed JavaScript syntax validation, and the final repository working tree was clean before the update commit.

Repository

The changes were committed and pushed to [osasbenny/elsmithconsulting-website](https://github.com/osasbenny/elsmithconsulting-website).
